

Stinkweed

Artemisia tilesii

Description

Stinkweed is a perennial, non-woody sagebrush species. The common name, stinkweed, refers to its smell when the leaves are crushed. The flowers are yellow and the leaves along the stem are blunt-tipped. Hairs cover the white-silvery stems and leaves.

Habitat and Range:

In the wild, or on revegetation sites, it has been found on many different soil types and prefers sun.

Food Use:

Stinkweed is not regarded as food. However, it is consumed as an Alaska Native cultural tea.

Caution:

Consuming large quantities can affect the central nervous system. The plant should be avoided by pregnant or breastfeeding women.
