# HPV

# HUMAN PAPILLOMAVIRUS SCREENING + PREVENTION

**Nearly all men and women will get at least one type of HPV infection in their lives**

## PREVENTION IS KEY

Preventing cancer is better than treating cancer

**90%**

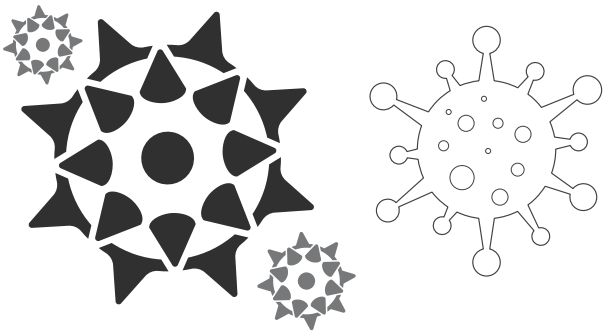

**Vaccination Works**
The HPV vaccine can prevent 90% of HPV cancers in men and women.

**32k**

**Vaccination Works**
More than 32,000 cases of HPV cancer are preventable.

**3** **Vaccines** are recommended for 11-12 year old boys and girls.

The HPV vaccine is most effective when given before exposure to the virus occurs.

The HPV vaccine does not cause HPV infection or cancer. HPV vaccines are made from a single virus protein that is not infectious, but provides immunity.
