

AGING WELL

Exercise

Why is exercise important?

Martha wants to stay active with her family and to maintain her energy levels for activities like berry picking, fishing, and playing with her grandkids. She also wants to live independently in her home without worrying about falling. With the support of an exercise physiologist, Martha decided to start an exercise program. She found exercises and activities that she enjoyed, which assisted with her strength, endurance, and balance. Staying physically active can also lower Martha's risk of chronic heart disease and diabetes, which runs in her family.

What are some considerations for exercise?

- Feeling weak or like you may fall
- Avoiding certain activities in fear of falling
- Low energy

Being physically active can help you stay mobile, avoid falls, and make daily tasks easier and can help you stay healthy, independent, and happy as you age. Being active can also support mental health, overall wellbeing, and quality of life.

Questions to ask yourself:

- Are you consistently physically active?
- Do you have any joint pain or physical ailments?
- Do you have any other barriers to increasing activity?
- Do you have any chronic health conditions or risk factors?
