## Life After Stroke

### Why care for yourself after a stroke is important?

Martha recently had a stroke and noticed her hands felt weak when trying to open medication containers or chop food. As a result, she had a hard time following her medication schedule and eating healthy. Martha told her provider about her concerns, and signed up for occupational and physical therapy. These resources helped her make changes to continue to live independently. Martha stopped smoking, now cooks healthy meals for herself and grandchildren, and is taking her medications as scheduled. Knowing how to care for yourself after a stroke can allow you to navigate daily life confidently and prevent a stroke in the future.

### What are some considerations for life after stroke?

- Weakness on one side of the body
- Hard time speaking or understanding others
- Changes in memory, difficulty focusing or making decisions
- Loss of interest and/or pleasure
- Hard time controlling your emotions
- Hard swallowing
- Fatigue

Your brain controls your ability to move, feel, think, and behave. Brain injury from a stroke can have an effect on these. Several factors affect the ways people experience a stroke.

### Questions to ask yourself:

- Are you falling at home?
- Do you have difficulty remembering day-to-day tasks?
- Are you doing your normal daily routine?
- Do you experience weakness?
